Creativity and Innovation

Your products are our passion

We are specialists in cardboard printing and processing. We are your ideal partner for developing packaging and display solutions. We can deliver creative solutions by identifying your precise requirements.

Cre/a/ti/vi/ty
(creative force)

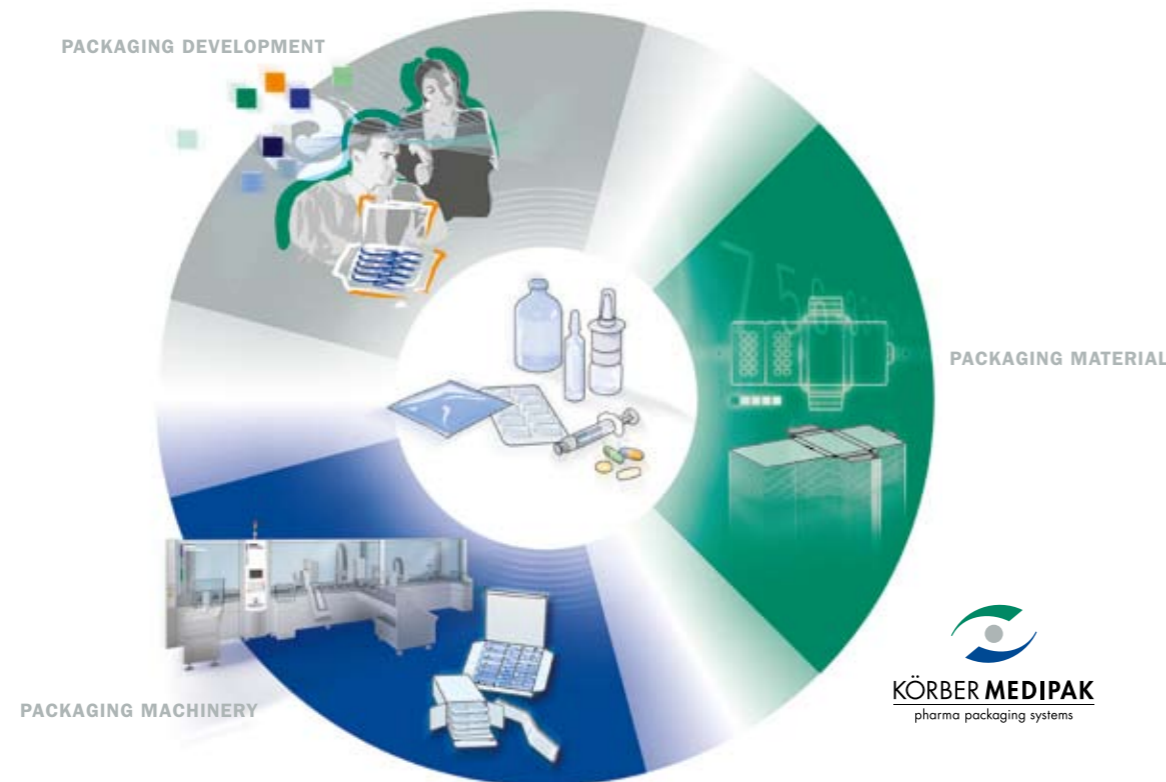

In/no/va/tion
(renewal by the application of new methods and techniques)

Here at Rondo, creativity derives from combining the superior skills of our specialists with our customer consultants' knowledge of today's packaging requirements.

Creativity and innovation: these key components for success make Rondo your ideal general contractor for developing, printing and processing a creative and innovative packaging solution.

This commitment to creativity is a pillar of the Rondo philosophy. Another is our willingness to embrace innovation, with continuing investment in state-of-the-art repro, printing and packaging technology.

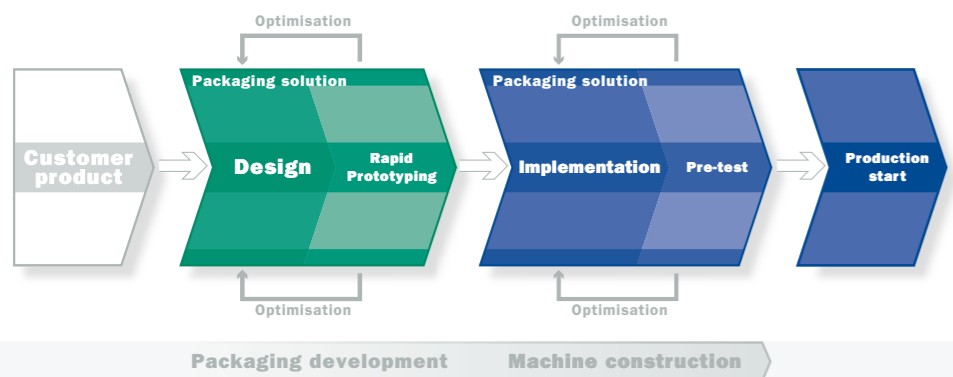

A strong Team

Cooperation and systems development

Rondo belongs to the KÖRBER MEDIPAK Group, which brings together decades of know-how in the production of pharmaceutical packaging material and modern machine construction, in order to develop customer-oriented packaging solutions.

Rondo · Dividella · MediSeal
The professionals for your packaging solution.

Time-to-market: simultaneous packaging engineering

The companies in the KÖRBER MEDIPAK Group:

Rondo Printing and Packaging

Rondo, CH-Allschwil, is a leading manufacturer of standard folding cartons and boxes in Europe for clinical trial samples and the market leader in special cardboard packagings for the pharmaceutical industry. Rondo also has extensive expertise in the manufacture of cosmetics packaging.

Rondo obaly is a subsidiary of Rondo AG. It is based near Pilsen in the Czech Republic and specialises in the manufacture of standard folding cartons for the pharmaceutical industry under GMP conditions.

Rondo-Pak Inc. is a subsidiary of Rondo AG. It is located near Philadelphia (PA/USA) and specialises in the production of standard and special packaging for the pharmaceutical industry.

Dividella Pharma Packaging Technology

Dividella, CH-Grabs, specialises in the development and production of machines for fully automated packaging of parenteral products and supplies innovative wallet-type solutions for the pharmaceutical industry.

MediSeal Pharma Packaging Technology

MediSeal, D-Schloss-Holte, is a leader in the development and manufacture of blister lines, cartoning and sachet machines.

Pre-print stage and sample packs

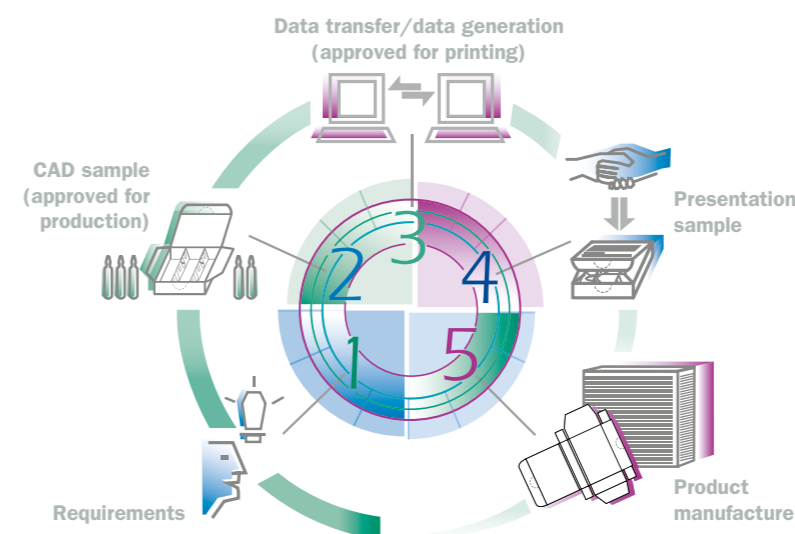

The basis for success

The very latest technology combined with many years of experience is the firmest foundation for successful products. Optimised processes guarantee quick runtimes and on-time deliveries.

Packaging development

In the first, digital design phase, computer-aided design (CAD) is employed to determine the perfect shape and functionality of the pack or display. This demands the utmost creativity and innovation, with reference to both handling and aesthetic appeal.

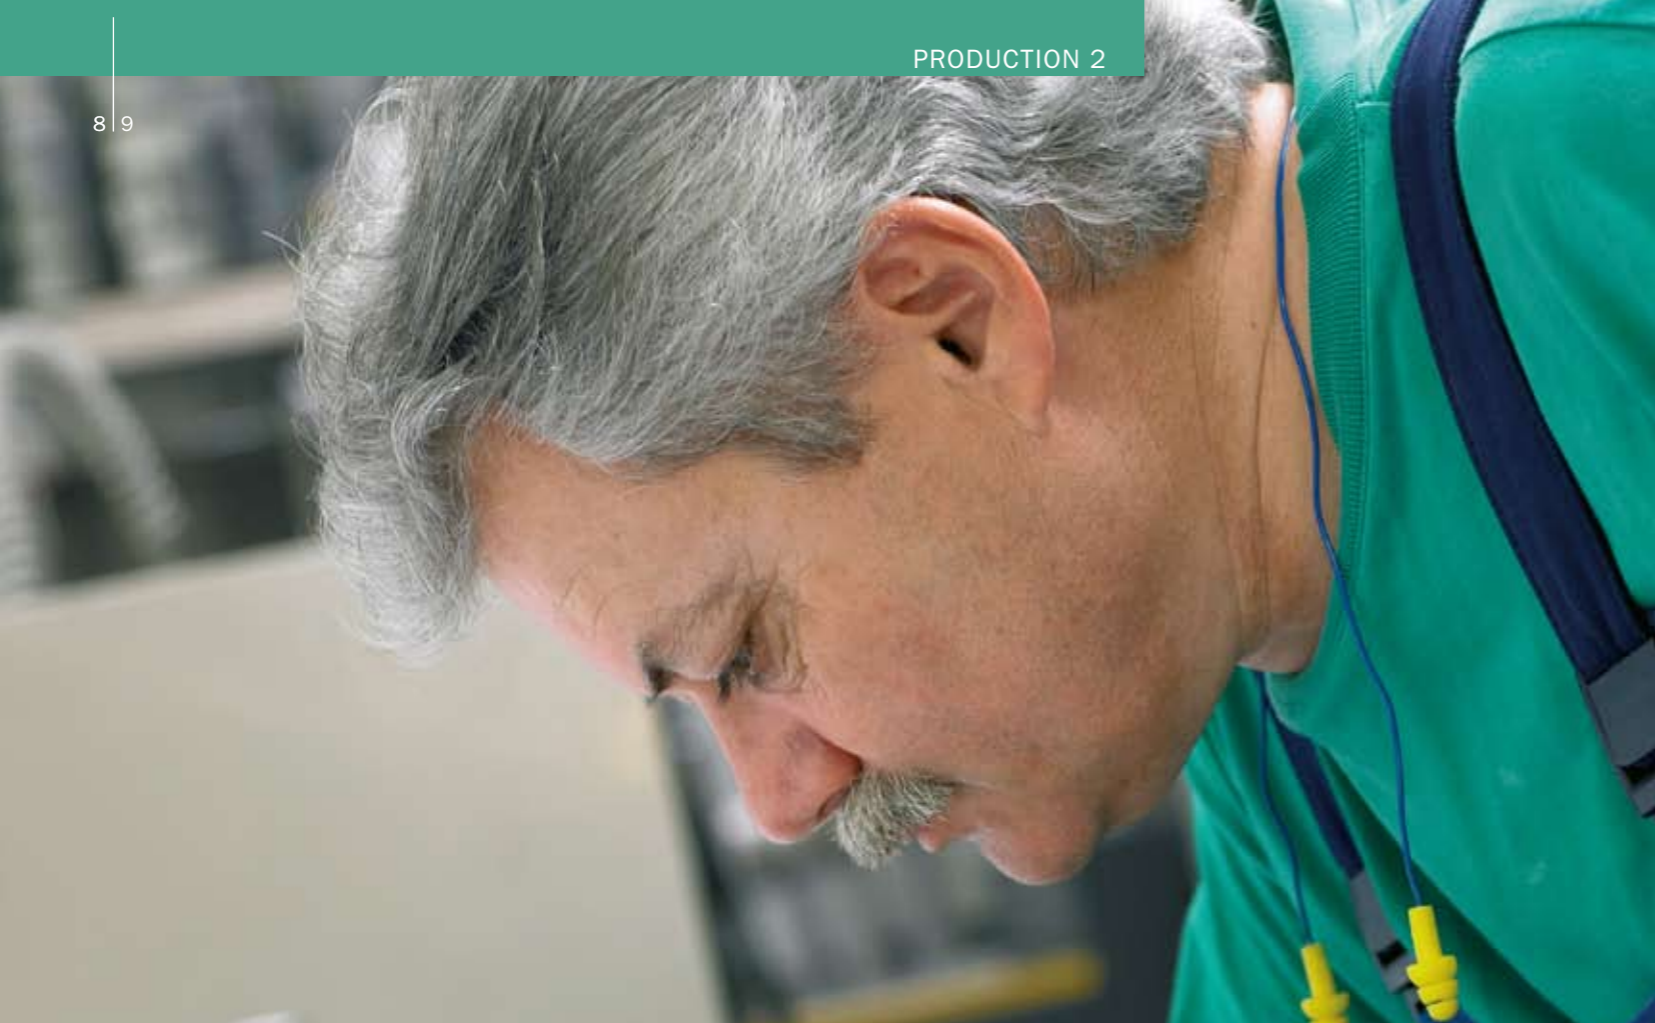

For us, creativity and innovation always mean developing packaging solutions which suit the product, which are aimed at specific target groups, which can be manufactured by machine and which permit automated filling.

Production of samples

The CAD data for the cartons is converted onto a plotter. The samples or displays which are produced in this way will be presented to you. Digital processing of text and images is the second stage; the objective is to produce printers' proofs quickly and at low cost.

Rondo's optimised production process

Printing and Quality Management

A superlative production process

Production of the printing plate

The next stage is the digital production of the printing plate. The Computer-to-Plate system installed in the Rondo factory ensures 100% digital data flow from the customer to the printing press. For our customers, this means quicker runtimes and major time savings.

Quality management

The world's leading pharma manufacturers are Rondo's customers. Perfect quality management is therefore of critical importance to Rondo. It is assured on the one hand by efficient quality assurance measures and systematic quality checks (ISO 9001:2000), and on the other hand by no-compromise compliance with GMP standards.

Logistics solutions

Supply Chain Management solutions offer great potential for optimisation. Today, Rondo is able to offer you appropriate SCM solutions, based on the SAP system which has been introduced at Rondo. This means we are in a position to build the optimal solution together with the customer.

The advantages are obvious:

- A substantial reduction in administration costs
- Greater security of supply, thanks to the possibility of providing the customer with automated status reports

- Optimised replenishment lead time
- Information exchange and communication are facilitated by short transmission times
- The possible error rate is reduced because of the automated flow of communication
- Scope control is optimised, with direct positive effects on inventory
- Capital lock-up is reduced
- The accounting process is automated

Our standard range includes special printing options. The range of Rondo/Dividella packaging also encompasses one-off solutions and in-house developments.

Ideas and Solutions to Problems

Time and time and again, our customer consultants' knowledge of today's packaging requirements stimulates our technical specialists to come up with extraordinary, creative ideas and solutions to problems.

1

Protection from counterfeiting

Unauthorised copies of original products are an increasingly common occurrence as a result of the opening-up of frontiers and new distribution possibilities (the internet, etc.). Appropriate countermeasures are therefore essential. In this area, we work for the pharmaceutical industry exclusively with the AlpVision company. The "Cryptoglyph" security feature can be incorporated invisibly into any existing packaging design. To

do this, the printing inks which are already being used are employed. Detection does not need any special equipment. Consequently, this solution offers a very cost-effective and highly secure means of determining whether the packaging is an original or a fake.

2

UV varnish – for the finest finish

UV varnish offers particularly high gloss and striking haptic appeal, combined with excellent protection and abrasion resistance. In addition, UV varnish also draws attention to a pack. Thanks to our latest printing presses, we are able to offer you up to 6 colours and UV varnish, as a flood or spot varnish, in one operation, even for fairly small quantities.

3

Very small quantities/small quantities/medium quantities

Rondo's small quantities centre opens up new dimensions for your sales strategy: folding cartons of excellent quality, printed, varnished, hot foil embossing and glued, in quantities from one to one million, with short lead times and at attractive prices.

Very small quantities	> 1 carton
Small quantities	< 30'000 cartons
Medium quantities	< 1'000'000 cartons

4

Child Resistant Package (CRP) – patent applied for

Together with its sister company Dividella, Rondo has developed attractive child resistant packages based on a wallet. TopPak meets the FDA's highest safety level F1.

5

Specialities (NeoTop, Top, fluted trays, etc.)

Together with our sister company Dividella, we have developed a number of other special products:

- fluted trays
- NeoTop, Neofix
- Top
- TopLoading
- Wallet
- Box Wallet

Hot foil stamp

Braille embossing

Barcode control

Hologram

UV varnish

System and Functionality Rondo and Dividella

What we mean by this is the optimum interplay of product, pack and packaging machine. Whatever the configuration of your product, be it liquid, paste or solid, the aim is always to achieve a made-to-measure packaging solution. The basis for these highly functional system solutions is the creativity and innovation of Rondo and Dividella's packaging development centres.

Functional and productivity guarantee

In the area of packaging development and sample design and production, because of its close cooperation with Dividella, Rondo is the only supplier able to guarantee the functionality of the pack and the productivity of the Dividella line.

NeoTop

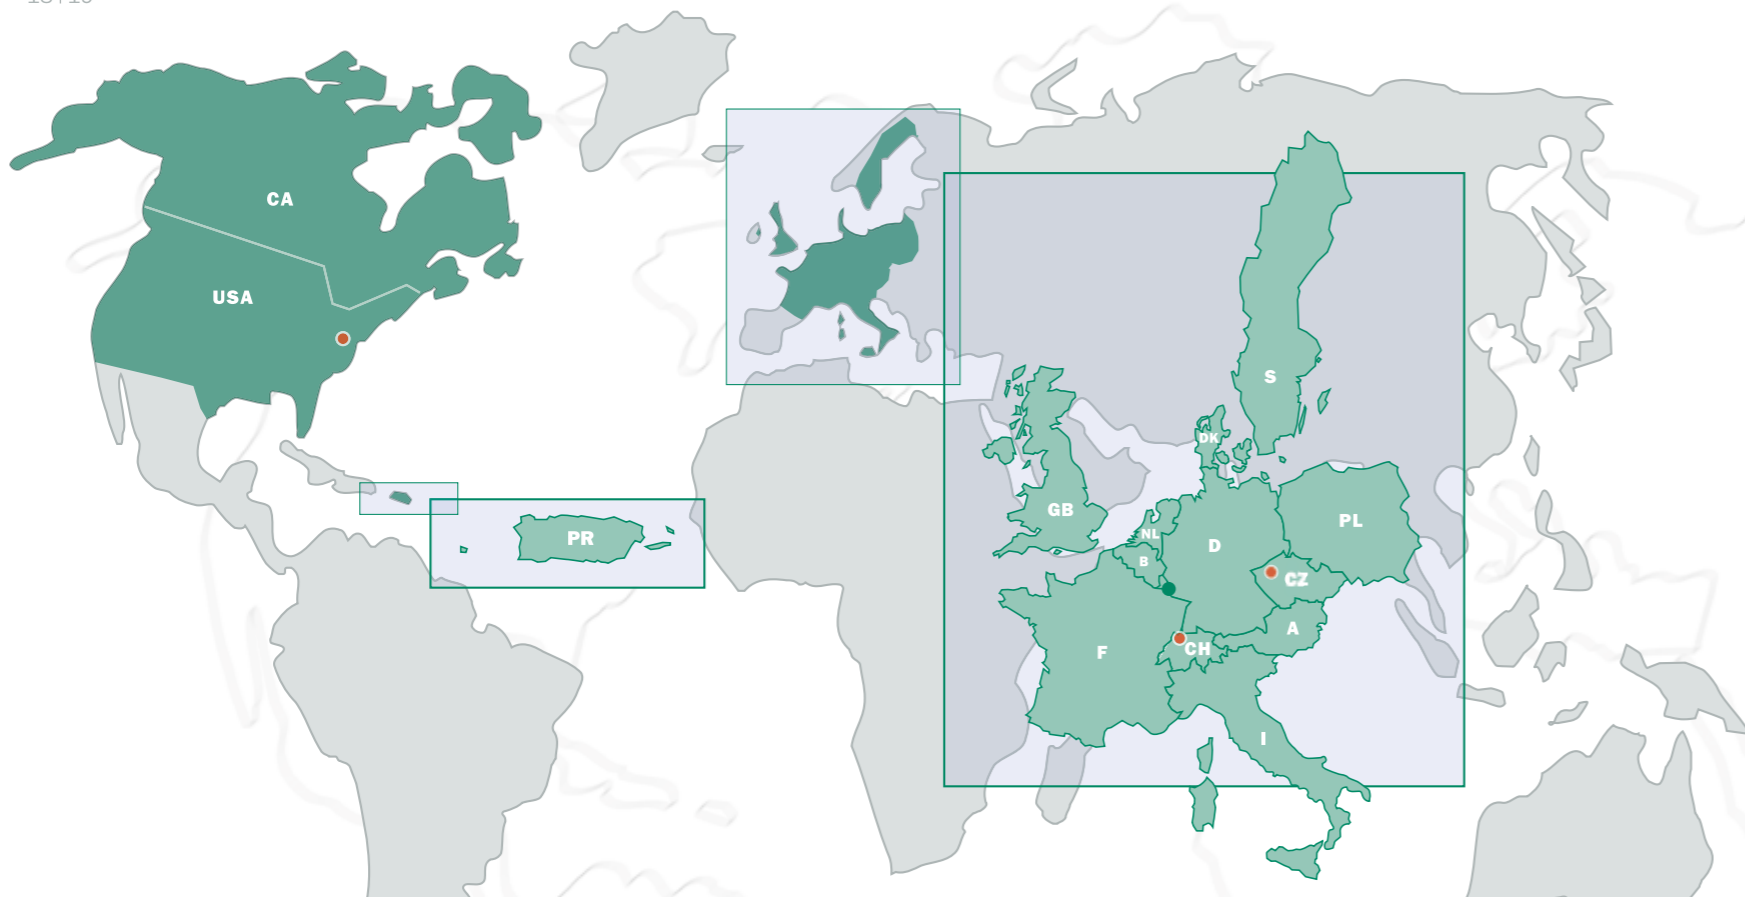

Rondo is able to cover the entire life-cycle of a product: from the initial sample, through the launch phase with fully erected, glued NeoTop boxes with flute blanks, to providing the customer with folding lids and blanks, supplied in flat form, for the Dividella line.

Rondo, a specialist in cardboard printing and processing, develops packages solutions which can be filled to perfection on Dividella's modular packaging machines. Depending on your requirements, the process can be manual, semi-automated or fully automated. The modular construction system means that machines can be extended and added to at any time. Dividella's unique platform concept is based on a tried-and-tested modular system which allows customised automation solutions to be built.

The system packs developed by Rondo/Dividella are erected on packaging lines from supplied flat blanks, then filled and provided with a tamper-evident seal.

The packages feature optimal product protection, low volume, and a large surface area for information; they are also easily disposable.
